W(A)		
U(A)		Granted L(A)
		R(A)
		W(A)
	L(A) blocked	
R(B)		
W(B)		
U(B)		L(B)
commit		R(B)
		W(B)
	Granted L(A)	U(A) U(B)
	L(B)	commit
	R(A)	
	R(B)	
	U(A) U(B)	
	commit	

(B)

Because strict 2PL further insures recoverability which is a feature that cannot be insured by 2PL, for example if a transaction is being aborted, all the locks will be released and all the effect became undone.
